Computer Science and Applied Mathematics student at the University of Colorado Boulder with experience developing cross-platform applications, automating software testing, and prototyping IoT solutions.

Education

University of Colorado, Boulder

Expected May 2029

Bachelor of Science in Computer Science and Applied Math,

GPA 3.724

Affiliations: Engineering Honors Program, CU Computer Science Undergraduate Advisory Committee, CU in Space, Society of Women Engineers, CU Heerey Bhangra

Relevant Coursework: Data Structures, Intro to Differential Equations and Linear Algebra, Computer Systems

Awards: Dean's List Fall 2025

Machine Learning Foundations Certificate - Cornell University

August 2026

- Completed a nine-week, hands-on program covering the ML lifecycle, exploratory data analysis, feature engineering, supervised learning, model selection, neural networks, NLP, LLMs, RAG, and AI agents using Python and industry-relevant tools.
- Developed decision tree and neural network models to predict salary brackets using U.S. Census data, achieving 85% accuracy with both models; recommended the decision tree based on its interpretability and lower computational cost.

Professional Experience

Medtronic

June 2026 - August 2026

Undergraduate Pipeline-Core Tech Intern

- Developed a cross-platform Dart/Flutter application to emulate MQTT data sent to a medical monitor for field demonstrations and system testing.
- Reduced simulator setup time by 80–90% by replacing a hardware-dependent system with an MQTT emulator, enabling faster, more reliable testing and automated testing workflows.

Melco International LLC

May 2024 - August 2024

Engineering Intern

- Automated testing for Melco Fusion, a web application, using Postman, reducing repetitive manual testing and improving regression-test coverage.
- Evaluated SmartBear TestComplete, Ranorex, and Testsigma for automated desktop testing and recommended the tool best suited to the company's needs.
- Researched an IoT expansion project and recommended a microservices architecture using MQTT for communication, which was implemented in an IoT prototype.

Technical Skills

Languages: C++, Dart, Python, Java, JavaScript

Web: HTML, CSS

Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn

Frameworks: Flutter

Tools & Platforms: Git/GitHub, Postman, Jupyter Notebook, MATLAB

Leadership and Honors

Break Through Tech Fellow

May 2026 - Present

- Selected from a pool of 4,300+ applicants for a competitive 12-month AI program.
- Participating in hands-on AI projects, industry mentorship, and professional development focused on leadership and project management.

NCWIT Aspirations in Computing Award

February 2025

Colorado Affiliate Honorable Mention
